Setup Expose

Overview

This documentation covers how-to setting up expose in Yayasan Vitka development environment.

Prerequisites

You need to set working development server first before using expose.

Installing Expose

```
$ composer global require "beyondcode/expose":"^1.0"
```

Configuration

1. Run:

   ```
   $ expose token 00000000-2ee4-4106-91ef-2bc888d66660
   ```

   > This token is only a dummy token. Please refer to internal documentation for real key.

2. Publish the configuration

```
$ expose publish
```

3. Edit configuration

```
$ nano ~/.expose/config.php
```

Copy

replace `'host' => 'sharedwithexpose.com'` to `'host' => 'dev.yayasanvitka.id'`

Running Expose

To test if expose is running, go to your web project directory, then run:

```
$ expose share https://siakad.test --subdomain=siakad
```

Copy

This command shares your local `https://siakad.test` to `https://siakad.dev.yayasanvitka.id`. Visit the url to see if it is working.
